

The radically new interface for TYPO3 5.0!

T3CON10 – Dallas – New details of the T35ui Project.

The radically new user-interface- and the concept-visions for the TYPO3 5.0 backend and frontend are going to be shown the second time to a broader public audience, to you. This time we have some new details we developed since the last Presentation 2009 in Frankfurt. Responsible for the innovative new interface and concepts behind TYPO3 5.0 are the well known three interface designers & concept architects Jens Hoffmann, Björn Brockmann & Rasmus Skjoldan. The Head of them „Jens“ is going to hold the presentation about the new user interface and the strategic concept by introducing some visual details everybody has been waiting for several years already. But we are still in an early phase of the User Experience (UX) and User Interface (UI) projects for TYPO3 5.0, this means some details could still change slightly in the future. But we are going to explain in this presentation some details of the general concept, based on detailed wireframes (*not real designs*), for all the possible new frontend and backend modules in the future.

After the presentation there will be a „Birds of a Feather“ session where you can give us some feedback of your first impression or inspired additional ideas and maybe help us to bring this new concept even to the next level. But you need to attend this presentation first, please. :)

Our main wishes for the new interface and concept are a mostly self explaining UI and a UX as comfortable as technically reasonable, in combination of the known powerful scalability and flexibility of previous TYPO3 versions. It is also very important in our eyes, for TYPO3 to keep the „soul“ of our all „baby“ alive. We are aiming for a very simplified concept and modern look & feel for the next major version of TYPO3.

In this proceeding you can find some unpublished internal secrets and very raw sketches of the futuristic visions for the upcoming TYPO3 versions. They should give you a first impression of some ideas behind TYPO3 5.0. Just to make thing clear, nothing in those sketches is mean to be final and fully thought through, it's a very early experimental stadium, but it is exclusive content and gives you an inside taste of the creative work behind this new UI and UX.
